This paper is submitted in response to the Office Action dated October 4, 2000. Favorable reconsideration of the above-identified patent application in view of the following remarks is respectfully requested:

REMARKS

a. §103(a); Burns

Claims 1 and 5-9 have been rejected under 35 U.S.C. §103(a) as being unpatentable over U.S. Patent No. 5,458,854 to Burns.

It is the examiner's position that it would have been an obvious matter of design choice to form the false bottom into an arcuate shape, since such a modification would have involved a mere change in the shape of the component. The examiner further states that a change in size is generally recognized as being within the level of ordinary skill in the art. In addition, the examiner states that applicant's specification does not disclose that the dimensions solves any particular problem or produces any unexpected result and therefore such is merely a matter of engineering design choice, and thus does not serve to patentably distinguish over the prior art. The examiner also notes that Burns does not disclose the false bottom end comprising an open bottom end extending from an arcuate shoulder.
